PCCC Radiography Students Celebrate National RadTech Week

Posted November 8, 2013

PCCC Radiography students created an informative and fun exhibit to celebrate this year's National Radiologic Technology Week, an annual event commemorating the November 8, 1895 discovery of the X-ray by Wilhelm Conrad Roentgen, a German physicist.

The attractive exhibit in the Broadway Gallery on the Paterson Campus featured a contest, information about the history of x-ray technology, a brochure about radiation, created by students, and details about the Radiography program at PCCC.

(left) Radiograpny students Lori Patti and Hector Colon host the exhibit. Both are enthusiastic about their chosen field and its job potential.

"I've been fascinated by radiography since I was a kid, and had to get x-rays for sports injuries," said Hector.

Lori changed careers and found radiography to be a good match. "I like working with people," said Lori, who already works as an aide at St. Joseph's Hospital.

(Below left) Can you guess what these everyday items are from their x-ray images?

(right) Phil Speulda, a criminal justice major, was determined to identify them all.
